5.	The cruisers were approximately the same length and had two stacks each. However, they were not the same type as the superstructures of the two vessels were different. The two large destroyers were of the same type. They had two stacks and torpedo tubes aft of the second stack.	each
!-	Each of the four small destroyers had one stack and a short stern a little longer than an ordinary MTB. There were three ships of the same type at anchor at Chizhov Island (N 69-45, E 40-33) when ship passed there on its way into Arkhangelsk.	25X1
3.	In Arkhangelsk, ship loaded at Sawmill No. 2 on Brevennik Island (N 69-39, E 40-32). The water depth was 25 feet on the outer side of the ship is 46 feet wide and it lay three or four feet from the edge of the pier. It was difficult to take a sounding on the immer side of the ship because of the timbers which extended from the pier under water. The ship remained in port from 17 to 25 May.	25X
